FAST TRACK COMMUNICATION

412201 Doping dependent nonlinear Hall effect in SmFeAsO$_{1-x}$F$_x$
Scott C Riggs, R D McDonald, J B Kemper, Z Stegen, G S Boebinger, F F Balakirev, Y Kohama, A Migliori, H Chen, R H Liu and X H Chen

PAPERS

NANOSTRUCTURES AND NANOELECTRONICS

415301 In-gap polaritons in uniformly filled microcavities
M Litinskaya and V M Agranovich

415302 Spin transport and bipolaron density in organic polymers
P Ingenhoven, R Eigger and U Zülicke

415303 Hollow nanoshell formation and collapse in binary solid solutions with large range of solubility
M A Gusak and T V Zaporozhets

SOLID STRUCTURE AND LATTICE DYNAMICS

415401 First-principles study of phase equilibria in Cu–Pt–Rh disordered alloys
Koretaka Yuge

415402 Shock Hugoniot of osmium up to 800 GPa from first principles calculations
K D Joshi, Satish C Gupta and S Raneree

415403 Prediction of superhard cubic boron–carbon nitride through first principles
Koretaka Yuge

415404 Raman spectroscopy and inelastic neutron scattering study of crystalline L-valine

ELECTRONIC STRUCTURE

415501 Electronic and elastic properties of CaF$_2$ under high pressure from ab initio calculations
H Shi, W Luo, B Johansson and R Ahuja

415502 Peculiarities of excited state structure and photoluminescence in Bi$_{35}$-doped Lu$_3$Al$_5$O$_{12}$ single-crystalline films
V Vabin, V Gorbunov, A Krasnov, A Makhotin, M Nkl, K Polak, S Zazubovich and Yu Zorenko

415503 Substitution behavior of Si in Al$_2$Ti (D0$_{22}$): a first-principles study
Guoliang Zhu, Yongbing Dai, Da Shu, Jun Wang and Baode Sun

CORRELATED ELECTRONS

415601 Ground-state properties of the two-site Hubbard–Holstein model: an exact solution
Yu-Yu Zhang, Tao Liu, Qing-Hua Chen, Xiaoguang Wang and Ke-Lin Wang

415602 $^{11}$B and $^{195}$Pt NMR study of heavy-fermion compound CePt$_2$B$_2$C
R Sarkar, A Ghoshray, B Fahari, M Ghosh, K Ghoshray, B Bandyopadhyay, M Majumder, V K Anand and Z Hussain

415603 The evolution of Griffiths-phase-like features and colossal magnetoresistance in La$_{2-x}$Ca$_x$MnO$_3$ (0.18 $\leq$ x $\leq$ 0.27) across the compositional metal–insulator boundary
Wanjun Jiang, XueZhi Zhou, Gwyn Williams, Y Mukovskii and R Pivazenzrov

(Continued on inside back cover)
